

# SHEAR COMFORT FOOT CARE

## QUICK REFERENCE GUIDE

**DiabPro series:** Designed for the Diabetic. Has a narrower sole width compared to other Shear Comfort footwear, has a posted support at the heel. This boot has a slimline design that makes it perfect for everyday use.

Narrower sole and reduced bulk gives a sleek look, is designed for active users who use the boots when walking around the house or outside. Two Velcro straps fasten the boot securely across the top and can be adjusted to accommodate swelling.

Seams are placed on the exterior for skin protection and softness. The sole can be built up with a rocker pad if required to assist in adjusting the gait pattern.

**Classic Wrap Around:** Offers full foot protection for use in and outdoors thanks to the low profile rubber sole. Comfort and an accommodating fit are ensured by the generous hook and loop strapping on the heel and top of the foot, allowing simple adjustment throughout the day to accommodate any discomfort or swelling.

**Slimline Wrap Around:** Same design as the Classic, however a narrow width for those clients with fewer challenges from swollen feet and do not require the full width of the Classic.

**Pressure Care Boot:** Provide comfort, support and freedom to those at risk from skin ulcers of the foot or ankle. Features a rubber sole for use outside as well as in, plus an open toe for easy toe inspection, toe separation, and air circulation. The hook and loop straps around the heel and across the bridge of the foot allow the shoe to be opened fully and adjusted to ensure that the shoe moulds comfortably to the shape of the foot. The Pressure Care Boot™ can be adjusted as required to accommodate any discomfort or swelling throughout the day.

**Short Slipper Boot:** designed to provide full foot protection, is ideal for using indoors and in bed. The hook and loop strapping and tongue flap down the length of the upper part of the boot ensures it is easy to put on and adjust throughout the day or night, providing adaptive protection and comfort. The Short Slipper Boot Classic has a heightened ability to mould to the foot, and can be comfortably worn in bed. The boot design ensures that the bony prominences of the ankle are fully protected as well as the foot plantar surfaces and heel, ensuring comfort and protection when worn in bed, or with your feet up.

**Sovereign Snug:** Shorter wool pile than our other footwear, giving a slimmer look and a reduced bulk. Velcro fastening and a non-slip suede sole, offers comfort and support for inside the house or whilst travelling.

**Tall Slipper Boot:** Providing comfort, easy adjustment, protection, and support to the entire lower leg. Velcro tabs along entire boots allows for adjusting, swelling. Can be used in conjunction with bandaging and compression wear.

**Heel Protectors:** Providing comfort to the heel and ankle areas. Effective prevention of skin ulcers in these “at risk” areas, provide protection for existing damaged skin. Wool layer wraps around the heel and ankle, leaving the rest of the foot free to move. Seams positioned on the exterior of the protector to relieve the skin from areas of high pressure. Velcro straps give plenty of room for adjustment.

**The Pressure Care Assistant:** can be used to protect a certain area of the body whilst in bed such as the heels or hips, and has a linen flaps that can be tucked under the edge of a mattress to secure it in place. Size: 70 x 30 cm
